**Conway School Board Report
Monday, February 13, 2022**

Student/Staff Accomplishments:

Health Science Technology (Kathleen Maynard): We recently added the Running Start Medical Terminology course and that the course has been going well with our class of 9 students. We had our site visit from a WMCC Professor Ann Morin 3 weeks ago. I would also be happy to share that we are moving forward with reinstatement of the LNA program, which was approved by the NH Board of Nursing. I am also happy to share that I've continued to work on developing our HST curriculum to be as holistic as possible. We continue to study Medical Math on Mondays, delve into medical ethics in all levels of HST, and learn about wellness practices that promote physical, mental and emotional health on Wednesdays (I teach a short yoga practice to my Level 1 and Level 2 classes at the start of class on Wednesdays each week). Students continue to show curiosity, motivation, and a strong ability to collaborate in my classes.

Advanced Manufacturing (Andy Shaw): Please see attached email from the Director of Projects, George Kessler, with NASA HUNCH.

Construction Trades (Paul Cail): Upon finishing a shed the students applied a centuries old technique to the exterior called Shou Sugi Ban. Originating in 18th century Japan, Shou Sugi Ban is a particularly striking method of preserving wood by charring it with fire. Traditionally, this practice is used with Japanese cedar in order to weatherproof it. The wood is burned until the surface is charred, and then coated with natural oil. The shed is beautiful and will be preserved forever.

Quarter 2 Student Spotlight: Once again we celebrate our students who have shown exemplary achievement in each one of our 14 programs.

CADD - Devon Glackin: Devon works very hard on his various projects to demonstrate his expertise and skills. He consistently demonstrates all the positive aspects of work ethic.

Aviation - Noah Keefe: Noah continues to thrive in the Aviation Program. He has shown a great work ethic and has begun his journey towards getting his private pilot's license.

ELO - Kaia Chakravadhanula: Kaia is a very motivated and driven student. Her dance ELO beautifully highlighted her creative insights and her perseverance.

Construction Trades - Griffin McAuliffe: Griffin is a no-nonsense kind of student. He takes his job seriously as a student in my class. He is a student that has a hunger for learning. I could not ask for a more dedicated student.

Criminal Justice - Annabelle Light: Annabelle is the epitome of a dedicated student. She is the first one to class every morning, and she is always prepared and ready to participate. Her work---both assessments and classwork---is of the highest quality. Annabelle collaborates well and is someone I can always rely on to help another student out. Dependable, professional, and motivated; I have no doubt Annabelle will succeed in whichever career she ends up in (and I'm hoping its Criminal Justice).

Advanced Manufacturing - Kylan Morneau: Kylan is one of our NASA/HUNCH leaders. He has become an innovator and problem solver in Advanced Manufacturing.

Automotive - Dylan Sportum: Dylan is an ambitious Auto II student. He is not afraid to take on new projects and works well with other students.

Marketing - Spencer Joseph Ballou: Spencer has proven to be a leader in the classroom. He has shown an extremely strong work ethic and is willing to help his classmates if they need it. It has been a pleasure having him in the marketing program for the last four years. He will attend the DECA Conference in February and hopes to compete and earn a medal in his category. Nice work, Spencer.

Culinary - Emily Slocumb: Emily has been involved in Culinary since middle school summer camp. She is presently enrolled as a Culinary 2 student. She has been instrumental in developing gluten free recipes such as English muffins, apple oatmeal dumplings, Ginger snaps and chocolate chips cookies. She also works at Flatbread Company.

Computer Programming - Sebastian Brochu: Sebastian is a creative and hardworking student. He is currently taking not 1 but 2 college level Computer Science classes at the same time and back to back. He has created some pretty impressive webpages such as a page which changes the gradient background based on the mouse's location and a nifty rock paper scissor game!

Business - Emily Kenny: Emily is a senior Business student currently enrolled in College Accounting and Finance. During her high school career Emily has not only completed all of the Running Start courses offered in the business program, but she has been concurrently enrolled in online classes through White Mountain Community College. Emily models the high standards of work ethic set in the White Mountain Career and Technical Education Center and is a shining example to all of us that focus and discipline are the mother of achievement.

Teacher Education - Jozelyn Henry: Jozelyn is the type of student teacher every teacher dreams of sharing their classroom with. Whether working with the Little Eagles or her students at Conway Elementary she gives them 110%. She is one of the first to jump in when extra hands are needed to support instruction and she always does so with a smile.

Health Science - Phoenix Sabatini: Phoenix shows curiosity, diligence, thoughtfulness and dedication each day in our HST classes. Phoenix's warm demeanor, close attention to detail and drive to build her knowledge while collaborating with classmates will serve her well on her path toward a career in healthcare!

Visual Media - Sophie Odell: Sophie Odell is one of those students that inspire you as a teacher. Instead of approaching assignments with the intent to just meet the standards, Sophie is constantly going above and beyond what is asked of her to push the boundaries of creativity and learning. I love how she sets the bar for herself!
